

Healthcare Consulting Engagement Final Board Presentation Requirements Guide

Presentation Goal

Your consulting team has spent time analyzing patient outcomes, hospital readmissions, care coordination effectiveness, financial performance, and operational efficiency.

The Board of Directors is not interested in the technical details of your predictive models. Instead, they want to understand:

How can National Hospital Network use clinical analytics, predictive modeling, financial analysis, and care coordination intelligence to reduce avoidable hospital readmissions, improve patient outcomes, optimize operational performance, and create measurable long-term organizational value?

Your presentation should communicate the business story behind your analysis and demonstrate how your recommendations support National Hospital Network's strategic priorities.

Section 1 – Executive Summary

Provide a concise overview of the consulting engagement.

Summarize:

- Business problem
- Overall consulting objective
- Most significant findings
- Three highest priority recommendations
- Expected clinical impact
- Estimated financial value
- Expected organizational impact

This section should provide enough information that an executive could understand the engagement without viewing the remainder of the presentation.

Section 2 – Business Problem

Describe the business challenge facing National Hospital Network.

Discuss:

- Historical readmission trends
- Clinical implications
- Operational impact
- Financial impact
- Executive concerns identified during the engagement

Explain why reducing avoidable hospital readmissions has become one of National Hospital Network's highest strategic priorities.

Section 3 – Data Overview

Provide an overview of the data sets used during the engagement.

Discuss:

Dataset 1

Patient Readmission Dataset

Explain:

- Purpose
- Clinical information
- Predictive modeling use

Dataset 2

Financial Impact Dataset

Explain:

- Readmission costs
- CMS reimbursement penalties
- Financial analysis
- ROI estimation

Dataset 3

Care Coordination Dataset

Explain:

- Care coordinator activities
- Follow-up care
- Intervention effectiveness
- Operational improvement opportunities

Data Integration

Describe:

- How the datasets were integrated
- Data quality issues encountered
- Missing values
- Data limitations
- Overall preparation process

Section 4 – Clinical Analysis

Present your clinical findings.

Discuss:

Patient Demographics

Diagnosis Categories

Chronic Disease Burden

Readmission Patterns

Patient Risk Profiles

Clinical Trends

Explain the major clinical drivers associated with hospital readmissions.

Section 5 – Predictive Modeling Results

Present the predictive models developed during the engagement.

Discuss:

Baseline Model

- Model selected
- Performance metrics

Advanced Model

- Model selected
- Performance metrics

Model Comparison

Explain:

- Why the final model was selected
- Feature importance
- Clinical interpretation
- Model limitations

Discuss how Executive Leadership should use the model to support patient risk identification and clinical decision making.

Section 6 – Care Coordination Analysis

Using the Care Coordination Dataset, evaluate current patient support programs.

Discuss:

Care Coordinator Effectiveness

Follow-Up Completion

Medication Reviews

Home Health Referrals

Transportation Assistance

Post Discharge Communication

Determine:

- Which interventions appear most effective
- Which interventions should be expanded
- Which interventions should be redesigned

Support your recommendations using quantitative evidence.

Section 7 – Financial Impact Analysis

Using the Financial Impact Dataset, estimate the financial value associated with reducing avoidable hospital readmissions.

Discuss:

Current Readmission Costs

CMS Reimbursement Penalties

Total Care Costs

Resource Utilization

Expected Financial Savings

Estimate:

- Conservative scenario
- Expected scenario
- Optimistic scenario

Whenever possible, discuss implementation costs and expected Return on Investment (ROI).

Section 8 – Executive Dashboard Walkthrough

Demonstrate your Tableau or Power BI dashboard.

Your dashboard should include:

Executive KPI Summary

- Readmission Rate
- Patient Risk Score
- Total Care Cost
- CMS Penalties
- Return on Investment (ROI)

Clinical Analytics

- Patient Risk Profiles
- Diagnosis Categories
- Chronic Disease Burden
- Readmission Trends

Financial Analytics

- Readmission Costs
- Financial Impact
- CMS Penalties
- Resource Utilization

Care Coordination Analytics

- Follow-Up Completion
- Care Coordinator Assignment
- Medication Reviews
- Home Health Referrals
- Transportation Assistance

Executive Recommendation Center

Summarize:

- Highest priority recommendations
- Expected clinical improvements
- Expected financial value
- Estimated ROI
- Suggested implementation priorities

Section 9 – Strategic Recommendations

Present your consulting recommendations.

Recommendations should address:

Patient Risk Identification
Care Coordination
Discharge Planning
Medication Management
Follow-Up Care
Resource Allocation
Executive Reporting

Recommendations should be:

- Data-driven
- Clinically appropriate
- Financially justified
- Operationally feasible
- Realistic to implement

Prioritize recommendations based on expected patient and organizational value.

Section 10 – Financial Impact & ROI Analysis

Estimate the value associated with implementing your recommendations.

Discuss:

Reduced Readmission Costs
Reduced CMS Penalties
Reduced Total Care Costs
Improved Resource Utilization
Return on Investment (ROI)
Expected Financial Return

Estimate:

- Conservative scenario
- Expected scenario
- Optimistic scenario

Whenever possible, discuss implementation costs and expected payback period.

Section 11 – Implementation Roadmap

Describe how National Hospital Network should implement your recommendations.

Include:

Immediate Actions (0–3 Months)
Short-Term Actions (3–6 Months)
Long-Term Actions (6–12 Months)

Discuss:

- Required resources
- Organizational challenges
- Potential risks
- Success measures

Final Executive Question

Your presentation should answer one fundamental question for the Board of Directors:

How can National Hospital Network use clinical analytics, predictive modeling, financial analysis, and care coordination intelligence to reduce avoidable hospital readmissions, improve patient outcomes, optimize operational performance, and create measurable long-term organizational value?

Every visualization, predictive model, dashboard, clinical analysis, financial estimate, care coordination assessment, and recommendation should contribute toward answering that question.

Executive Presentation Expectations

Your Board presentation should demonstrate that your consulting team can:

- Translate complex analytical findings into executive level recommendations.
- Integrate multiple datasets into a single clinical and business narrative.
- Balance analytical rigor with practical healthcare decision-making.
- Quantify the clinical and financial value of your recommendations.
- Clearly communicate complex information to non-technical stakeholders.
- Defend your recommendations using evidence from the data.

The Executive Leadership Team will evaluate your work based on the quality of your analysis, the practicality of your recommendations, and your ability to communicate how data science can improve patient outcomes, reduce avoidable hospital readmissions, strengthen care coordination, and improve the long-term performance of National Hospital Network.
